EXPERIENCE

Full-Stack Developer — AppZap

AUG 2024 - APR 2026

Tech Stack: React, Node.js, Tailwind CSS, PWA, WhatsApp Cloud API

- Independently developed the web-based ordering and booking system for restaurant clients, replacing manual workflows with a scalable digital solution.
- Reduced mobile app load times by ~30% by implementing Progressive Web App (PWA) capabilities and offline caching.
- Integrated WhatsApp Cloud API to enable real-time customer messaging and order notifications.
- Diagnosed and fixed UI issues in the AppZap POS system, improving consistency and usability.

Front-end Developer — Lailaolab ICT Solutions

DEC 2023 - AUG 2024

Tech Stack: React, Next.js, Tailwind CSS, Figma

- Delivered responsive, pixel-accurate interfaces for 10+ client projects based on Figma designs.
- Improved page performance by up to 25% through layout optimization and efficient rendering.
- Collaborated closely with designers and back-end developers in agile sprints to ship features on tight timelines.
- Ensured consistent cross-device and browser compatibility, helping reduce post-launch UI fixes and client revisions.

Software Engineering Intern — Wecare

APR 2023 - JULY 2023

Tech Stack: Nuxt.js, Tailwind CSS, Apollo Client, GraphQL, Playwright

- Developed a responsive admin dashboard with a clean UI architecture, reducing admin task time by ~20%.
- Integrated GraphQL APIs using Apollo Client, improving data handling and front-end responsiveness.
- Added multilingual support, expanding usability to additional language regions and improving accessibility.

PROFESSIONAL SUMMARY

Full-Stack Developer with 3 years of professional experience and a 5-year computer science foundation, specializing in Next.js, Node.js, and TypeScript. Delivered responsive, scalable web systems across restaurant tech, SaaS, and Fintech — consistently improving performance by 25–30%. Currently building non-custodial crypto payment infrastructure and AI-powered Discord tooling as independent projects. Known for clean architecture, pixel-accurate UI delivery, and bridging design and backend in agile teams.

TECHNICAL SKILLS

Full-Stack Development: React, Next.js (App Router), Node.js (Fastify/Express), and TypeScript.

Backend & Infrastructure: Supabase/PostgreSQL, MongoDB, Redis, GraphQL (Apollo), and RESTful API design.

Testing & Quality: End-to-end testing with Playwright, Unit testing with Jest, and CI/CD via Vercel and Netlify.

Tooling: Git/GitHub, Docker, pnpm, and Figma-to-Code optimization.

Other: Responsive Design, SEO Basics, Code Optimization, API Integration, User Experience

- Implemented end-to-end testing using Playwright, increasing test reliability and reducing deployment regressions.

EDUCATION

Bachelor of Science in Computer Science

SEP 2020 - JULY 2024

Soutsaka Institute of Technology — Vientiane Capital, Laos

Coursework Toward Bachelor of Engineering

AUG 2017 - FEB 2020

Beibu Gulf University — Qinzhou, China

PROJECTS

KnotEngine | Crypto Payment Infrastructure

GitHub: [qodinger/knotengine](https://github.com/qodinger/knotengine)

- Architected a **non-custodial payment gateway monorepo** using **Fastify** and **Next.js**, supporting Bitcoin and EVM-compatible stablecoins.
- Developed a custom **HD Wallet derivation engine** (BIP44) to ensure funds flow directly to merchant wallets without intermediary custody.
- Implemented a high-availability monitoring system with **dual-blockchain provider failover** (Tatum & Alchemy) and **HMAC-signed webhooks**.
- Published a **TypeScript SDK** and a merchant dashboard featuring real-time **Socket.io** notifications and automated database TTL pruning.

Role Reactor Bot | Discord Automation

GitHub: [qodinger/role-reactor-bot](https://github.com/qodinger/role-reactor-bot)

- Engineered a feature-rich Discord bot with an **AI-powered avatar generation** system and a credit-based economy.
- Integrated **crypto payment gateways** for the "Core Credit" system, enabling automated financial transactions within community servers.
- Developed **high-concurrency automation tools** for self-assignable roles, temporary role expirations, and scheduled assignments.
- Built a production-ready infrastructure featuring **enterprise-grade logging**, health monitoring, and a scalable **MongoDB** integration.
- Designed a **comprehensive moderation suite** with bulk

operations, history tracking, and automated voice channel controls.
